

# Installation Guide

## Advanced Customer Email Manager

Before starting the installation process, ensure you have backed up your store's database and web directory.

**Important Note:** This module depends on the **ArmMage\_Base** module. Ensure that this module is already installed and enabled on your Magento 2 store.

### Step 1: Download the Module

First, download the Advanced Customer Email Manager for Magento 2 module from our store. The module will be in a compressed file (zip or tar.gz), so you need to extract it.

### Step 2: Upload the Module

After extracting the compressed file, you should see a folder named **ArmMage\_CustomerEmail**. You need to upload this folder to your Magento 2 store's module directory.

If your store is on a server, you can use an FTP client (like FileZilla) to upload the files. You need to upload the ArmMage\_CustomerEmail folder to the [Magento 2 Root Directory]/app/code directory.

### Step 3: Enable the Modules

After uploading the files, you need to enable the ArmMage\_Base module (if not enabled yet) and the ArmMage\_CustomerEmail module.

Log in to your server using SSH.

Navigate to your Magento 2 root directory.

Run the following commands:

```
php bin/magento module:enable ArmMage_Base ArmMage_CustomerEmail  
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:setup:static-content:deploy -f
```

### Step 5: Clear the Cache

Lastly, to make sure that the changes take effect, clear the Magento cache by running the following command:

Run the following commands:

```
php bin/magento cache:flush
```

Now, the Advanced Customer Email Manager for Magento 2 module should be successfully installed and ready to be configured and used in your Magento 2 store.
