

# Armenian Language Pack And Locale

## Installation Guide

**Step 1:** Download the Armenian Language Pack and Locale module from the Magento Marketplace or from the ArmMage website.

**Step 2:** Unzip the downloaded package and upload it to the Magento 2 root directory.

**Step 3:** Connect to your server via SSH or terminal and navigate to your Magento 2 root directory.

**Step 4:** Run the following commands in the terminal:

Note: If your website in production mode you should change it default or developer module to select locale for corresponded store or website

```
php bin/magento deploy:mode:set [developer or default]
```

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:di:compile
```

```
php bin/magento setup:static-content:deploy hy_AM
```

```
php bin/magento cache:flush
```

**Step 5:** Apply the patch to fix encoding issues with float numbers.

**Note:** This step is optional depends from Magento version, it is required for < 2.4.3 version of Magento

Run the following command in the terminal:

```
patch < app/code/ArmMage/ArmenianLocale/patches/hy_locale.patch
```

Step 6: When prompted for the file to patch, enter the following:

```
patch < lib/internal/Magento/Framework/zendframework1/library/Zend/Locale/Data/hy.xml
```

**Step 7:** Finally, clear your browser cache and refresh your website to see the changes.
